Agriculture

William L. Harrelson, Commissioner

STATE FAIR EXHIBIT—One of the most popular exhibits at the 1971 South Carolina State Fair in Columbia was a tobacco display. The South Carolina Department of Agriculture in cooperation with the Tobacco Division of the U. S. Department of Agriculture and the Flue-Cured Tobacco Coop Stabilization put on the exhibit. Commissioner of Agriculture William L. Harrelson (L) is shown looking at some of the tobacco leaves with federal tobacco grader Tim Barrineau who was on hand to answer questions as thousands of persons viewed the exhibit.

State Budget and Control Board

Cash Receipts, Average Price Hit New Highs

South Carolina's 1971 tobacco marketing stream flowed smoothly, winding up with new highs for both total producer cash receipts and average price per pound.

Final figures from the 37 warehouses showed cash receipts of \$106,259,036.66 and an average price per hundred pounds of \$75.74. The previous top cash total for producers was \$104,117,-347.79 established in 1970 and the former high average was \$72.80 posted in 1969.

Expenses continued to take a huge bite out of cash receipts for farmers.

"A farmer's operating expenses have shown no downward trend," explained South Carolina Commissioner of Agriculture William L. Harrelson. "These increases in prices will be eaten away by subsequent rises in costs for them.

"Labor, fertilizer, chemicals, equipment and other supplies must come out of a tobacco farmer's cash receipts even before he can realize a little something for himself," added Commissioner Harrelson. "All too often the farmer winds up with the smallest total of any of them."

From its beginning in the plant bed, South Carolina's 1971 tobacco crop shaped up as one of the finest produced in recent years. Farmers followed closely the use of recommended chemicals in a strong effort to maintain the foreign trade market. These markets had declared their intentions to curtail purchases of tobacco subject to DDT, DTE and other illegal chemicals. The U.S. Department of Agriculture announced it would not give price supports for tobacco grown with these outlawed chemicals.

Quality over quantity was emphasized by most tobacco growers. The coming of higher temperatures and warm nights spurred the growth of the crop as the early days of summer rolled around.

Weather Tossed Knockout Punch at Crop

From this quiet beginning, dark clouds arose bringing tornadoes, hail and high winds. Weather conditions were extremely severe in South Carolina during the early part of June. Tobacco and other row crops suffered extensive damage.

These Tobacco Leaves Lay Useless on the Ground—Victim of A Storm Which Lashed the Field and Caused Thousands of Dollars Damage to the Crop.

Almost all of the tobacco-growing counties were effected by the weather. Light to total losses occurred in approximately 10,000 acres. The crop, however, survived this pitfall to turnout a final production of an estimated 141,900,000 pounds state-wide.

With labor becoming more expensive and scarce, tobacco growers again utilized as much mechanization as possible. The problem with the machinery continued to be the fact that most farmers were small acreage growers and could not afford the equipment.

Research into further automation for the flue-cured tobacco crop is being maintained by Clemson Extension Service personnel and manufacturing companies.

The South Carolina Warehouse Association set a 1971 opening date of Aug. 3, following meetings in mid-July. This compared with a 1970 opener of July 28. A total of 34 sales days were held with regular sales ending Sept. 30. In 1970, a total of 51 sales days were required.

Weekly Sales Reports Helped Flow

One of the most significant marketing happenings of the 1971 sales season was the weekly report filed by each tobacco ware-

house operating in the State of South Carolina. Operating under an Act requiring the reporting, at the conclusion of the week's sales a form was mailed to the Commissioner of Agriculture listing the state of origin, type, number of pounds and price sold for of the tobacco for the producer, dealer and resold by the warehouseman.

These reports were compiled by the South Carolina Department of Agriculture and results mailed back to warehouse operators, interested persons and news media.

"This furnished our South Carolina warehouses with probably the most complete information of this type available in any belt," stressed Commissioner of Agriculture Harrelson. "Because of the speed in which it was returned to the warehousemen, they were able to utilize the information the following week."

Warehousemen felt the weekly composite reports gave them a more informative picture of where the tobacco they were selling was coming from to their warehouse floors. "It allowed us," said one spokesman, "to look out for our local and area growers first and then handle any other tobacco we had space for on our floors."

High Price Greeted Opening Day

With a heavy volume marketed opening day, a new high average was established on the South Carolina and Border North Carolina flue-cured markets, according to the Federal-State Market News Service.

The average was \$74.36 per hundred pounds, topping the 1970 high of \$71.09. On South Carolina's 11 markets, a total of 6,744,071 pounds was sold for an average of \$74.32.

Only six percent of gross sales opening day went to the Stabilization Corporation compared to the 26.3 percent placed under government loan in 1970's opening day sales.

Second day sales kept pace while Stabilization Corporation receipts dropped slightly.

For opening week, South Carolina sales, according to the Market News Service, totaled 19,737,437 pounds for an average of \$74.54 per hundred. Stabilization received just 5.2 percent of the gross sales.

Reports from the 37 warehouses filed with the South Carolina Department of Agriculture for opening week showed producer sales of 19,431,149 pounds for \$14,475,552.25 and an average per hundred pounds of \$74.50. South Carolina type 13 tobacco sales totaled 16,849,581 pounds for \$12,600,253.29 and an average of \$74.78 per hundred of the overall figure.

Prices of opening week were record high on the belt.

Second Week Brought One-Day Record

Second week sales on Aug. 9 got off to a flying start when an all-time one-day high of \$77.27 per hundred was set on South Carolina's 11 markets for the sale of 5,515,846 pounds. The previous high mark was the \$76.04 established Aug. 18, 1969.

Strong demand and selling during the second week helped to establish a new weekly average high. The Federal-State Market News reported 21,795,469 pounds sold on South Carolina markets for an average per hundred pounds of \$76.94.

Warehouses in their weekly reports to the South Carolina Department of Agriculture listed producer sales of 21,033,360 pounds for an average of \$77.14. South Carolina type 13 tobacco amounted to 17,974,582 pounds with an average of \$77.57.

Buyers Pause on the Auction Line to Discuss A Particular Pile of Tobacco

Third weeks sales opened with a bang on Aug. 16 when 10,803,-656 pounds went for \$77.85 per hundred to hit a new belt high for one day, surpassing that of a week earlier. South Carolina markets sold 5,899,427 pounds for a \$78.01 average that day. Stabilization receipts for the day were only 5.3 percent of gross sales.

Leaf quality during the third week increased slightly with less primings and nondescript offered.

Volume and cash receipts showed a climb for the week, according to warehouse totals filed with the South Carolina Department of Agriculture. Producer sales for the week were 21,877,424 pounds for an average of \$77.01. South Carolina type 13 sales included 19,491,702 pounds for an average per hundred of \$77.20.

The date of Aug. 23 marked the heaviest daily volumes on the belt since opening week with 10,946,398 gross pounds sold for an average of \$77.21 per hundred. South Carolina markets accounted for 4,935,504 pounds with an average of \$77.29.

Steady prices prevailed during the fourth week of sales with South Carolina warehouses listing 21,835,462 pounds for an average of \$76.26 during the week on producer sales. Type 13 South Carolina tobacco totals were 19,245,101 pounds for an average per hundred of \$76.25.

Beginning Aug. 30, South Carolina markets operated on a reduced selling schedule. Sales for that date were 5,203,035 pounds for \$77.27 per pound. The high average per hundred resulted from higher grade prices and a better quality of tobacco offered for sale.

The reduced selling time dropped the Aug. 31 sales totals on South Carolina markets under five million pounds and the average of \$75.68 per hundred.

Slump Started in September

With sales days reaching into September, the weekly average reached its lowest level since opening week. Volume remained heavy with many markets having more of the crop than could be sold. General quality of the crop during the week was lower with increased percentages of poor and low quality offered.

Fifth sales week figures reported by warehouses to the South Carolina Department of Agriculture showed producer pounds of

With A Hand Signal, Buyer Makes Known His Bid To Auctioneer On A South Carolina Warehouse Floor

18,532,985 sold for an average of \$75.34 per hundred. South Carolina type 13 tobacco amounted to 16,776,653 pounds for an average of \$75.37.

Producer sales after five weeks on South Carolina markets had reached a total of 102,710,380 pounds with an average per hundred of \$76.10.

After the Labor Day holiday, gross sales attained their third highest mark of the season, according to the Federal-State Market News Service, with 12,416,808 pounds bringing an average per hundred of \$76.71. South Carolina markets sold 6,238,899 pounds of this total with an average per hundred of \$76.71.

Shutdowns Began With Two Markets

Markets at Kingstree and Pamplico staged their final sale on Sept. 9.

With only three sales days recorded during the sixth week of sales, warehouses reported producer sales of 17,113,358 pounds for an average per hundred of \$75.27. South Carolina type 13 tobacco amounted to 14,726,393 pounds with an average per hundred of \$75.36.

Volume dropped early during the seventh sales week because of a cutback in sets of buyers and selling time. The Sept. 13 sales for South Carolina showed only 3,104,521 pounds for an average per hundred of \$75.97.

On Sept. 16, markets closed at Conway, Darlington, Dillon, Hemingway, Lamar and Loris.

Warehouse reports for the seventh week of sales revealed 13,-805,308 producer pounds sold for an average per hundred of \$74.60. South Carolina type 13 included 10,091,381 pounds for \$7,552,-832.61.

This week lifted producer pounds to 133,629,046 and cash receipts to \$101,343,692.10.

Prices began to weaken on the three remaining markets operating during the eighth week of tobacco sales. Total pounds sold in South Carolina on Sept. 20 were just over one million with the average \$75.50 per hundred.

Timmons ville completed its sales year on Sept. 23, leaving Mullins and Lake City to stage final sales.

The warehouse report for the eighth week of sales showed \$4,-128,247 producer pounds for an average per hundred of \$73.93. South Carolina type 13 sales were 2,352,215 pounds for an average per hundred of \$73.76.

Sales for that week were composed of larger percentages of both low and poor grades with a decrease in the proportion of good and fair marketings.

A strong demand marked the last week of sales, starting Sept. 27. Prices held up well during the week of auctions with two South Carolina markets reporting producer sales of 1,270,059 pounds for an average price per hundred of \$74.22.

Outstanding Overall Season Recorded

South Carolina's 37 tobacco warehouses for the season showed producer sales of 140,288,541 for cash receipts of \$106,259,036.66 and an average per hundred of \$75.74. South Carolina type 13 for the season for producers was 118,879,213 for an average per hundred of \$75.96.

Border Belt South Carolina 13 and North Carolina 13 sales amounted to 90.3 percent of the grand producer total on the state's 11 markets.

New highs for both average price per pound and total cash receipts for producers were attained during the 1971 season. The previous high average was \$72.80 per hundred in 1969 while the former total cash receipts mark was \$104,117,347.79 set in 1970.

Commissioner of Agriculture Harrelson was quick to point out that the cash increase did not reflect the true profit to the tobacco producer because of the higher expenses for growing the '71 crop.

Consumer Protection Specialists Worked Markets

During the marketing season, the Consumer Protection Division of the South Carolina Department of Agriculture worked extensively in the tobacco marketing section of the state.

Fuel oil and LP gas delivery meters were inspected prior to the start of the harvesting season to insure accuracy in all deliveries. This procedure proved to aid both the farmer and the fuel oil or LP gas jobber.

Consumer specialists visited each of the 37 warehouses prior to their opening to check scales and obtain uniform weights of the hand trucks and sheets. It was required that the weight of the truck and sheet be posted near the scale for the benefit of the farmer. Periodic checks of the accuracy of the scales continued throughout the marketing season.

These specialists were concerned with the weighing of the tobacco to provide the most accurate weight for the farmer, warehouseman and buying company. They remained on the markets throughout the entire buying season.

"Warnings were issued for inconsistent weighing practices," explained Commissioner Harrelson. "Supervised weighing of various sheets of tobacco was done under the watchful eyes of our specialists. A number of piles of tobacco had to be reweighed because they were condemned by a consumer specialist for an inaccuracy."

A total of 8,064 sheets of tobacco were weighed during the season and supervised weighing on company bought tobacco was done for 1,793 piles.

Consumer Protection Specialists Check Weigh A Pile of Tobacco From Warehouse Auction Line

Each tobacco warehouse was required to have a licensed public weighmaster and any deputy weighmasters as needed. The weighmaster or deputy was able, under the Public Weighmasters Law, to issue a statement as to the accurate weight of the commodity.

Two deputy weighmaster licenses were suspended during the marketing season for incorrect weighing practices.

"We were told by the tobacco industry," stated Commissioner Harrelson, "that they had enjoyed the best weighing of tobacco this past year in South Carolina in a long time."

Tobacco Stands As Unchallenged Leader

Tobacco remains the unchallenged leader of South Carolina's agricultural economy, a role it has played since 1957. The crop has contributed an average of more than 80 million dollars annually during the period.

Eighteen of the 46 counties in the Palmetto State look to tobacco for economic support. Cash receipts from tobacco in 1970, the latest figure available, accounted for 22.8 percent of the total farm marketing of \$442,037,000, according to figures from the South Carolina Crop and Livestock Reporting Service. Among cash re-

ceipts for crops, tobacco accounted for \$100,818,000 of the \$261,700,000 total.

History bears out the vital role tobacco played in the establishment of the New World. John Rolfe, whose romance and marriage with Pocahontas in 1614 brought him popular fame, was credited with planting the first tobacco seed in America. These seed were brought in from the Spanish colonies of Trinidad and Caracas. His first crop was cured at Jamestown, Virginia, in 1612 and a shipment of several hundred pounds sent to England to compare with the Spanish leaf used at the time by London smokers.

Bolstered by a favorable reaction, a new export trade was set up for the colonies and by the end of the colonial period, the tobacco colonies of Virginia, Maryland and the Carolinas were exporting some 100 million pounds of the leaf annually.

This export trade was partially responsible for the fresh hope which began to flourish in America at that time, making possible the creation of a vast, new English-speaking country.

South Carolina's tobacco growing industry received a big boost when the first tobacco market was established in 1890 after Florence County farmer Frank M. Rogers had persuaded manufacturers from Durham, North Carolina, to set up a market at Florence.

Slowly and gradually, tobacco began to climb towards the top of the agricultural economy in the State. Producers in 1909 sold just over 31 million pounds of tobacco for 2.3 million dollars on South Carolina markets. In 1917, a big growth spurt was noted when 51 million pounds brought 11.7 million dollars. From this point, with few exceptions, tobacco production became a multi-million dollar farming industry in the State. Following World War II, South Carolina growers were producing more than 100 million pounds of tobacco annually resulting in incomes of more than 50 million dollars. The biggest production year in history for South Carolina growers was in 1962 when over 166 million pounds was harvested. The biggest financial harvest was in the recently completed 1971 season when producer sales amounted to over 106.2 million dollars. The 1971 average of 75.74 cents per pound is the highest mark on record.

Tobacco grown in South Carolina is a Bright variety used primarily in cigarets. It is cured by heated air within the tobacco

barns which accounts for the name "flue-cured." This tobacco is a resultant variety from Rolfe's experimental plants.

Flue-cured tobacco accounts for more than half of all types produced on farms in America and South Carolina's crop is recognized as among the best leaf in the country.

Growing Crop Is Fulltime Operation

Tobacco growing is a farm art in South Carolina. A tobacco grower takes pride in producing a crop of good quality, fine-textured tobacco. This farm operation requires almost a full 12 months a year.

From the beginning of a seed so small that about 443,000 of them are required to make an ounce to the end with a neatly

South Carolina Tobacco Grower Pulls Off a Quality Leaf

arranged basket of tobacco leaves of uniform size and color, a crop of tobacco demands many man hours. Mechanization is making progress in small steps into production of the crop. A large investment in equipment is required for a producer to completely mechanize and this high investment does not fit the pattern of the average flue-cured tobacco grower and his small acreage.

Experts say that about 400 hours of labor are now required for production of one acre of tobacco. This labor is most critical at harvest time which is forcing many producers to either purchase or rent harvesting equipment.

Extensive testing of mechanical tobacco harvesters is underway by tobacco companies and land grant colleges in an effort to provide some relief for hard-pressed farmers. Basically, these harvesters strip leaves from the stalks, drop them on conveyor rollers which in turn move them to a trailer where they are taken to a curing facility.

Other research is underway to develop new varieties to ripen uniformly and new curing processes.

The year-round tobacco operation follows the pattern of the markets closing in late September or by mid-October. In the following weeks, growers are reminded to select a site for their plant beds and get the site ready. After the bed site is selected, early fumigation is needed to aid in the production of superior plants.

Changing market conditions and appearances of diseases have resulted in demands for new and improved tobacco varieties. The most popular varieties are the newer ones which carry some tolerance to most of the common soil-borne diseases which strike the plants. Clemson University publishes an annual list of recommended varieties which growers follow usually.

Predominant soil series for tobacco growing in South Carolina are Norfolk, Varina, Marlboro, Goldsboro, Dunbar, Lynchburg and several minor types. Crop rotation and soil treatment are important in production. Rotation helps get the most from the soil and controls certain diseases. However, the limited amount of suitable tobacco-producing soil makes the rotation program hard to maintain on many farms.

After the tiny seed have grown into plants several inches tall

It Doesn't Take Too Many Weeks for Tiny Tobacco Plants To Stretch Into the Sky

in the plant bed, they are transplanted into fields either by hand or by machine. The spacing of the tobacco plants in the row of the field determines the yield and quality of tobacco produced. Close spacing reduces size and thickness of the leaf and often results in thin-textured chaffy leaves on the bottom area of the stalk. Growers, however, sometimes use this close spacing to increase per acre yields. Often this backfires because it results in more expense and a lower net price per pound. Wider spacing increases the size of the individual plant and produces leaves which are longer, wider and thicker.

In a normal growing season eight or nine weeks after transplanting, tobacco comes into "top." The seed head begins to form at this time and begins to "button out." Flowers start forming about

a week later in what is known as the early bloom stage. Tobacco growers are ready to "top" or "sucker" at this time. Generally, the tobacco plant is topped out at the ball sucker or one to two leaves below, depending on the prevailing moisture conditions, fertilizer applied and the height of the plant at topping.

This topping is essential to the production of a high quality tobacco. It promotes leaf development, growth of suckers and stimulates root growth.

Skill Required for Harvesting, Curing

Harvesting and curing are two facets of tobacco production which test the skill of the farmer. It is possible to improve the quality of the crop if proper attention is given to these two techniques. The crop is ready to prime as soon as the leaves begin to yellow and are primed before burning begins. As the leaves are primed, they are either strung on sticks or bulk racked for placing in the curing barn. A tobacco leaf contains about 80 percent moisture as it goes into the curing barn. The removal of this excess moisture is the prime reason for the curing process, but the main value of it comes from the chemical changes that take place during the process. A successful curing requires that the excess moisture be removed under conditions that will allow the proper chemical changes to take place.

Curing preserves the quality, flavor and aroma that are produced in the tobacco plant in the field. Curing tobacco is a process of controlling temperature, humidity and air flow.

As tobacco growers harvest the green leaves in the field, they try to keep them uniform and ripe. These leaves then cure together and result in uniform grades which requires little or no sorting after being removed from the curing barn. Farmers who do not grade when harvesting have to sort the leaves after taking them off the curing barn sticks.

Tobacco is marketed as soon as possible after it is removed from the curing barn. South Carolina tobacco has been sold loose leaf since 1967 when the State was granted a total of 95 hours of loose leaf selling time at the beginning of the marketing period. Since 1968, the entire sales period has been loose leaf with full price support. Tobacco also is sold on burlap sheets 96 inches by 96 inches to provide a more orderly system of marketing from

Tobacco Leaves Dot Countryside Throughout Pee Dee Area Of South Carolina

the curing barn to the tobacco company storage facility. This pre-sheeting saves labor and provides easier handling of the pile of tobacco.

Excitement Surrounds Warehouses

Color and excitement are all a part of the continued story of tobacco with the scene moving to any one of 37 auction warehouses in the 11 communities located in the tobacco producing area of the Palmetto State.

More than 900 of these auction warehouses are located in some 160 communities in 12 states from the seaboard states of Florida to Maryland and inland to Kentucky and Tennessee.

Settings typical of old-time street markets before our present-day stores take place in the tobacco warehouses. All flue-cured tobacco is sold in this manner with each grade put on a separate sheet and weighed separately. Each pile of tobacco has a ticket with the grower's name and the number of pounds. A government grader also places the official government grade on each pile of tobacco so the grower might know the grade of tobacco being offered for sale.

Crowds gather early on the day the tobacco market opens for the first time. Old-timers are there long before the 9 a.m., starting time to swap tales of crops past and present. Newcomers to the community and oftentimes foreign visitors attend the sales to get a glimpse of what makes the wonderful world of tobacco marketing tick.

They see rows upon rows of the golden tobacco leaf with a pungent newly cured scent filling the air. Entire farm families are on hand dressed in freshly washed clothes eager to view the results of hard labor for a year.

All ears are tuned for the melodious cry of the auctioneer with the bids as buyers pass along the rows and bid competitively on each pile of tobacco. Each pile is sold to the highest bidder. A short time after the sale, a farmer receives a check for his sales. Then he either heads to the business section of town to do some shopping or returns to the farm to prepare the remainder of his crop for marketing.

Tobacco Economy Reaches Into Many Areas

Tobacco's impact on the economy of South Carolina reaches into many areas. Crop sales generate some half-billion dollars into the financial mainstream of the State through money received by the grower who in turn pays the warehouseman for warehouse charges. Warehouse help is paid from this money. The farmer also pays any hired labor he has used and settles his account for such expenses as fertilizer, equipment and insurance along with furnishings for the home, goods for the family and other luxury items.

Exact figures are difficult to determine, but a good guess is that a quarter of a million people in South Carolina receive either a part or their entire income from money pumped into circulation by the tobacco crop.

Another benefit to the South Carolina economy is tax revenue from the sale of tobacco products. The South Carolina Tax Commission reported during fiscal year 1969-70 that tax revenues on tobacco products sold within the state amounted to a net of some 18.5 million dollars. The Federal Government gains tax revenues of some 20 million dollars from the same source. The State of South Carolina taxes cigarets at the rate of six cents per pack while the Federal Government tax is eight cents per pack.

National tax revenues from cigars for federal, state and local government units amounted to some 4.8 billion dollars in 1970, according to the Tobacco Tax Council, Inc.
